# LIGHTHOUSE

REG SCANNING & TRACEABILITY

---

Aurexia is proud to introduce LIGHTHOUSE, our regulatory horizon scanning and rule traceability solution.

Regulatory Horizon Scanning has become a critical activity for firms, as the volume of regulatory alerts and publications increases.

## Horizon Scanning

---

Our solution is more than a **data feed** of the regulators that are relevant to you. We provide high-quality **technical analysis**, a **flexible workflow** and a **smart dashboard** that will enable you to monitor, process and manage regulatory developments more efficiently.

Firms are increasingly expected to evidence how they have implemented and achieved compliance with each of rule that is applicable to them.

## Traceability

---

Our solution will enable you to map rules to your internal **policies, procedures, and controls**; and to document applicability at different levels. This is supported by a flexible workflow and a smart dashboard that will help you manage the end-to-end process more efficiently.

If you would like to discuss our solution in more detail and see a demonstration of its key functionalities, please reach out to our team at [expertise.lux@arexia.com](mailto:expertise.lux@arexia.com).
