Navigating through the complexity of ESG regulations

Supporting investors with making more informed choices in respect of sustainability and diverting capital flows are the primary objectives of the European Commission's Action Plan on Financing Sustainable Growth.

Whilst the regulatory changes (both in the UK and the EU) are at different stages of finalisation and implementation, the underlying objectives remain the same:

- From a climate perspective, how do we adapt to climate change and mitigate our contribution to greenhouse gases?
- From a holistic ESG perspective, how do we improve choices and support more informed decision making by investors?

This framework targets both non financial and financial actors (Asset Managers, insurers, retail and private banking, CIB, Securities Servicers) while implying finance and risks divisions to work on improved ESG reporting.

EU legislation framework is way ahead from North America and Asia. However, they catch up fast, lots of new international coalition has been created, mainly about climate.

Regulatory requirements around product transparency and investor information are likely to increase buy side demand for ESG products

- Previously, asset managers were driven by investor demand.
- Now greater regulatory scrutiny and disclosures (including a comply or explain regime measuring performance against adverse impacts) is likely to result in a greater shift by the buyside to ESG products.

The ESG regulatory framework is still under construction with several expected changes in the future

- The EU Platform on Sustainable Finance (PSF)
 recently published its final report for a Social
 Taxonomy to establish a classification system of
 economic activities that contribute to social goals.
- Upcoming International Sustainability Standards
 Board (ISSB) by end 2022.
- Upcoming report on technical screening criteria for the 4 remaining environmental objectives to be published by PSF.

Consolidated UE roadmap with main ESG regulations including 3 **French LEC**

	2	022	2023	2024 and beyond
SFDR « Disclosure »	30/06/2022 – 30/06/2023 First reference period for Principal Adverse Sustainability Indicators (PAI)		By 30 Jun. 2023 Publication of PAI (quantitative ind.)	By 30 Jun. 2024 Publication of PAI (with reference period)
Taxonomy	1 Jan. 2022 Art. 8 (entity disclosures): Publication of the proportion of eligible assets (adaptation & mitigation			1 Jan. 2024 Report of the activities aligned with the 6 targets of Taxonomy
Decree article 29 LEC (Article 1-V)	1 Jan. 2022 Publication on biodiversity aligned activities and strategy		1 Jan. 2023 Publication of Taxonomy-aligned activities	
MIFID Integration of ESG	2 Aug. 2022 ESG suitability requirements	22 Nov. 2022 ESG product governance requirements		
CSRD				1 Jan. 2024 CSRD Reporting
Climate Risk Stress Test	1 Mai 2022 Climate change scenarios to be delivered by the ECB	1 Jun. 2022 Projections to be computed and provided by the banks	By 2023 Next EU-wide stress tests	

Aurexia Sustainable regulatory offer

- Regulatory analysis: taxonomy, climate stress tests, SFDR, CSRD, green bonds standards
- Identification of products and services impacted
- Identification of tools and processes impacted
- Detailed impacts analysis (changes to be expected in documentation/reporting, new documents and publications, process, organization, controls,...)

- SFDR policies according to the orientations taken (sustainability policy, PAI,...)
- MIF2 / IDD: product governance updates to include non-financial objectives, customer journey updates (questionnaire, client's profiles)
- Taxonomy: eligibility and alignment reporting drafting
- Article 29 / CSRD reporting: enrich existing article 173 reporting or creating new ones

- ESG data mapping: meet the disclosures and reporting requirements
- Data sourcing: internal data, providers data (RFI / RFP)
 - Number of ESG data providers selected
 - Building internal capabilities.
 - Using alternative data vendors to plug gaps
- Maintaining Data: what data needs to be collected and stored internally (e.g. from clients, other sources)?

www.aurexia.com

Aurexia has developed a data dictionary and decision maps that translate into executable code for SFDR PAI reporting.
